Professional Summary

Experienced software developer with expertise in web technologies and a proven track record of delivering high-quality solutions. Full working rights in AU

Work Experience

La Trobe University (2025)

Technologies: Vue, Typescript

Created an Advanced Standing Credit application with modern and responsive UI.

JET Charge (2023)

Technologies: React, Typescript, .NET, Azure Cloud

I worked with a team of Developers, Hardware Engineers, and DevOps to deliver a B2B charging management platform.

TallBob (2022)

Technologies: React, Redux, Typescript, Laravel Mix, AWS, Jest Testing Library, npm.

I created and implemented the enhanced version of the customer self-service portal.

Movember (2015)

Technologies: PHP, Zend Framework, HTML, CSS, JavaScript, MySQL

Working for Movember is special for me. Our team's efforts have made a real difference in men's health. We've helped raise awareness about important issues like prostate cancer and mental health. It's amazing to see more men talking openly about their health because of our work. Knowing that we've helped save lives and improve men's well-being makes me feel that my job truly matters.

Online courses with MongoDB University (2014)

Technologies: MongoDB, Mongoose

I took a series of online courses to learn how to run MongoDB in the web applications. This translated to a better knowledge of cloud document databases later.

ACER (Australian Council for Educational Research) (2011)

Technologies: PHP, Zend Framework, MVC, HTML, MySQL

In the role of a back-end developer, in a 5-person team, I developed an automated exam grading system for the PISA tests. The system enhanced the scoring process by providing a single-page interface for reviewers to view student answers and input scores.

Move to Melbourne (2009)

A courageous decision to leave everything behind and call Melbourne home. I consider myself a Melburninian now and have lived there more of my adult life than anywhere else.

Intenium GMBH (2008)

Technologies: C++, Python, HTML, CSS, JavaScript, MySQL

I worked on the backend for the multiplayer game "Alamandi". My role was focused around real-time game data

collection, analysis and visualization.

HeroCraft (2007)

Technologies: Java ME, J2ME, MySQL, XML

With the passion for video games development, I joined Herocraft, a mobile game development company, where I worked on the mobile client for Jamango social network.

Baltic Federal University named after Immanuel Kant (2003)

Technologies: Computer programming theory, C++, SQL, Databases theory, Python, Assembly language, Computer graphics, Algorithms and data structures

Masters degree in the Applied mathematics with a focus on the informational technology, numerical methods and mathematical modeling.

Education
